WHEN STRONG WIND BLOWS...
DAVI IS THERE

It is the strong wind blowing over Europe that provides clean energy from wind farms, with wind towers, largely built using DAVI plate rolls, as in the case of a major customer in West Europe that has recently installed a new production line based on a DAVI plate roll with capacity 3000 x 120 mm.

“This production line is able to reduce production time and costs”, said the owner of the company “that has convinced us to choose DAVI again, thanks to the experience gained in the previous machines that we have used for over 15 years”.
